Task Manager Web App - Requirements

1. Overview

A simple web application where a person can sign up, log in and manage a personal to-do list. The goal is a small first release that is easy to use and works on desktop and mobile browsers.

2. User Accounts

2.1 A visitor can register with name, email and password.

2.2 A registered user can log in with email and password and log out.

2.3 Passwords must be at least 8 characters and stored securely (hashed).

2.4 A user can reset a forgotten password using a link sent to their email.

3. Task Management

3.1 A user can create a task with a title, an optional description, a due date and a priority (Low, Medium, High).

3.2 A user can edit and delete their own tasks.

3.3 A user can mark a task as Completed or move it back to Pending.

3.4 A user can only see and change their own tasks.

4. Task List and Search

4.1 The home page shows the user's tasks sorted by due date.

4.2 A user can filter tasks by status (Pending, Completed) and by priority.

4.3 A user can search tasks by title.

4.4 Overdue tasks are highlighted in the list.

5. Non-Functional Requirements

5.1 Pages load in under 3 seconds on a normal connection.

5.2 The interface works on screens from 360 px wide and up.

5.3 All data is stored in a relational database (PostgreSQL).

5.4 The first release does not include team sharing, file attachments or push notifications.
